Interdisciplinary Researcher | Systems, Technology, Embodiment, and Human Experience

Research Profile

I am an interdisciplinary researcher and systems practitioner exploring how technologies, institutions, and cultural frameworks shape human experience, access, labor, embodiment, and meaning. My work brings together psychology, somatic studies, disability and accessibility, technology ethics, behavioral health, and systems analysis.

My current research interests include artificial intelligence and labor, algorithmic decision-making, trauma and somatic experience, chronic illness, accessibility, institutional legitimacy, and alternative understandings of time. I am particularly interested in the distance between formal systems and lived reality, and in how structures that appear neutral or efficient can redistribute labor, risk, exclusion, and uncertainty.

My approach draws on critical analysis, literature synthesis, qualitative observation, professional practice, and lived experience. A background in software engineering, accessibility, behavioral-health systems, teaching, spiritual care, and organizational consulting informs my focus on the relationship between systems and the people who must navigate them.

Research Interests

AI ethics and social impacts; labor, productivity, and time; algorithmic decision-making; trauma and somatic psychology; chronic illness and disability; consciousness and meaning-making; accessibility and inclusive systems; interdisciplinary and qualitative research.

Education

California Institute of Integral Studies, San Francisco, California

Bachelor of Arts in Interdisciplinary Studies, 2025

GPA: 3.79

Pima Community College, Tucson, Arizona

Associate of Arts in Liberal Arts, 2006

Graduated with Honors

University of Arizona, Tucson, Arizona

Undergraduate coursework in psychology, 2007

Additional Education and Training

California Institute of Integral Studies, San Francisco, California

Psychedelic-Assisted Therapies Certificate Program, Accepted for October 2026 enrollment

Research and Scholarly Work

Everything Was Supposed to Get Easier: AI, Labor, and the Commodification of Time

Undergraduate capstone, California Institute of Integral Studies, 2025

Interdisciplinary analysis of the gap between technological promises of greater leisure and the continued intensification of work. Examined artificial intelligence within longer histories of labor, productivity, capitalism, and the treatment of time as an economic resource.

Somatic Modalities as Complementary Approaches to Chronic Pain Management

Course research paper, California Institute of Integral Studies, 2025

Compared somatic and body-based approaches with conventional medication-centered treatment for chronic pain, with attention to embodiment, self-regulation, and the relationship between physical symptoms and lived experience.

How Justice Systems Extract Generational Payment for Individual Crimes

Course research paper, California Institute of Integral Studies, 2025

Examined how punishment extends beyond an individual sentence through lost time, family disruption, economic exclusion, and intergenerational consequences.

Relevant Professional and Applied Experience

Account Services Coordinator II

Commission on Accreditation of Rehabilitation Facilities

Tucson, Arizona | 2002–2008

- Supported senior behavioral-health leadership within an international accreditation organization serving healthcare and human-services providers.
- Developed and delivered training for accreditation surveyors on patient and consumer interviewing, bias awareness, data interpretation, organizational performance measurement, HIPAA, ADA compliance, and accessibility.
- Contributed to the design and user testing of an enterprise content-management system developed by Accenture, including the preparation and execution of structured test scripts.
- Reviewed, documented, and redesigned departmental procedures to improve consistency, communication, and operational effectiveness.
- Participated in multidisciplinary meetings involving behavioral-health leadership, regulatory concerns, technical requirements, and organizational policy.
- Advanced through nine promotions into a custom-created role supporting the Director of Behavioral Health.

Senior Software Engineer, Accessibility Center of Excellence

Dell Technologies

Round Rock, Texas | 2022–2023

- Conducted comprehensive accessibility evaluations across web, mobile, and design-system environments using automated testing and manual validation with assistive technologies.
- Identified gaps in existing quality-assurance practices and developed training that expanded accessibility test coverage from 62% to 100%.
- Researched and implemented accessibility standards within a centralized design system, translating WCAG requirements into practical guidance for designers, developers, and QA teams.
- Collaborated across global teams to integrate accessibility testing into development workflows and CI/CD processes.
- Evaluated user interaction across NVDA, VoiceOver, TalkBack, and Narrator to identify barriers affecting disabled users.
- Delivered department-wide education on inclusive design, manual testing, and institutional accessibility practices.

Spiritual Counselor, Somatic Practice Facilitator, and Educator

Independent Interdisciplinary Practice

Fresno, California | 2014–Present

- Provide individual and group-based spiritual guidance centered on reflection, meaning-making, relational concerns, life transitions, and personal development.
- Design and facilitate meditation, somatic-awareness, embodiment, and mindfulness practices supporting self-observation and emotional regulation.

- Work with participants from varied spiritual, cultural, and philosophical backgrounds while maintaining clear ethical boundaries and appropriate scope of practice.
- Develop educational material connecting spiritual practice, psychological insight, embodiment, and lived experience.
- Facilitate seasonal, ritual, and contemplative practices within an established spiritual framework.
- Officiate weddings and commitment ceremonies and support individuals navigating major life transitions.

Systems Strategist and Human-Centered Technology Consultant

Independent Systems and Technology Consulting
Fresno, California | 2008–Present

- Analyze complex organizational, technical, and human workflows to identify barriers, inefficiencies, and unintended consequences.
- Design and implement digital systems supporting communication, data organization, decision-making, accessibility, and operational sustainability.
- Translate technical findings into clear documentation, training, and recommendations for nontechnical stakeholders.
- Apply accessibility and human-centered design principles to evaluate how people interact with digital platforms and institutional processes.
- Conduct qualitative observation and pattern analysis to understand how systems influence user behavior, participation, and outcomes.
- Develop custom tools and workflows that reduce administrative burden while improving client autonomy and long-term maintainability.

Co-Producer

Faust Productions
Tucson, Arizona | 2016–2018

- Contributed to the development of a documentary project examining the psychological and emotional effects of cancer on patients, caregivers, and families.
- Supported research, project coordination, interview development, outreach, and public-facing educational work.
- Helped shape content addressing illness, grief, caregiving, survivorship, identity, and the broader social experience of serious illness.
- Assisted in translating complex and emotionally sensitive experiences into accessible public narrative.

Teaching and Facilitation

Meditation and Somatic Practice Facilitator

Independent Practice and Community Settings

2014–Present

- Design and facilitate individual and group meditation, mindfulness, guided visualization, embodiment, and somatic-awareness practices.
- Adapt instruction to participants with varied experience levels, abilities, belief systems, and learning needs.
- Support participants in developing greater awareness of bodily sensation, attention, emotional regulation, and reflective practice.
- Create structured educational experiences connecting psychological, spiritual, and embodied approaches.

Movement and Belly Dance Instructor

Community, Studio, and Independent Settings

2001–Present

- Teach movement, musical interpretation, embodied awareness, improvisation, and performance skills to adult learners.
- Develop accessible instruction for students with varied physical abilities, backgrounds, and levels of experience.
- Use verbal, visual, rhythmic, and kinesthetic teaching methods to accommodate different learning styles.
- Facilitate group learning environments centered on body awareness, confidence, creative expression, and cultural context.

Professional Training and Curriculum Development

CARF, Dell Technologies, and Consulting Practice

2002–Present

- Developed and delivered professional training on patient interviewing, bias awareness, data interpretation, organizational performance measurement, accessibility, inclusive design, software testing, analytics, and digital systems.
- Created documentation, demonstrations, testing protocols, and hands-on learning materials for technical and nontechnical audiences.
- Trained globally distributed development, design, QA, administrative, and client teams.
- Translated complex regulatory, technical, and organizational concepts into practical procedures and repeatable workflows.

Podcast Host and Public Educator

Independent Platform

2019–2020

- Produced and hosted long-form interviews with authors and practitioners exploring spirituality, psychology, ethics, and contemporary practice.
- Facilitated public discussions on cultural appropriation, spiritual bypassing, shadow work, spiritual psychosis, power, and inclusion.
- Developed educational content connecting spiritual practice, psychological interpretation, ethical inquiry, and lived experience.
- Built and maintained an engaged audience across audio and video platforms.

Research Methods and Competencies

Research and Analysis: Interdisciplinary research; literature review and synthesis; qualitative observation; comparative analysis; critical theory; systems analysis; behavioral and organizational pattern recognition; research-based writing.

Human-Centered and Applied Methods: Accessibility evaluation; inclusive design; usability assessment; stakeholder interviewing; process analysis; curriculum development; facilitation; knowledge translation; technical documentation.

Behavioral Health and Embodied Practice: Behavioral-health systems; patient and consumer interviewing principles; bias awareness; trauma-informed communication; somatic awareness; mindfulness; reflective dialogue; meaning-making.

Technical and Digital Methods: Data organization; digital research workflows; web technologies; Python familiarity; analytics systems; automated and manual accessibility testing; assistive-technology evaluation; AI-assisted research and development tools.

Accessibility: WCAG 2.1 and 2.2; WAI-ARIA; ADA and Section 508 awareness; screen-reader testing with

NVDA, VoiceOver, TalkBack, and Narrator; axe DevTools; Accessibility Insights; PDF accessibility and VPAT documentation.
